PROJECTS

E-pharmacy, An online medicine ordering responsive website

05/2023 – 06/2023

- A dynamic medicine ordering website that offers seamless user navigation, **secure authentication**, **cart and checkout functionality**, a bunch of admin activities, and **real-time order tracking**.
- Built with **HTML, CSS, JavaScript, PHP, Laravel Framework and Microsoft SQL Server database**.

CardioCare, A collaborative project using Git and GitHub

04/2023 – 06/2023

- A user-friendly **Android app** that allows individuals to easily **track and monitor** their **blood pressure** and **heart rate data**. The app enables users to **record measurements**, **view a list of records**, **edit existing entries**, and **highlight unusual blood pressures**

E-pharmacy, Mobile application (Android)

10/2022 – 12/2022

- A Medicine based **E-commerce android application**. It is build in **Android studio**
- Users get services like add to card, searching, their order, get notification etc. Admin can also add medicine, confirm or cancel order and other facilities.

Hand Gesture Detection System

11/2023 – 01/2024

- build a **virtual mouse** to control the computer without using a physical mouse and using only hand gesture. **Python** is used in backend

Library Management System

03/2023 – 04/2024

- It is a **SQL database query** related project where user can rent books very easily and admin can manage the library management system very easily.

School management project

09/2021 – 11/2021

- Simple file management system using only C language. Where Authority can assign course to Teachers and Students and also manipulate them Teacher can add exam's number and track them. Students can see their number.
